

ANXO HERRERA CASTRO

Madrid, Spain | (+34) 684 60 8127 | anxoherrera@gmail.com | [LinkedIn](#) | [GitHub](#)

PROFILE

With a rigorous STEM foundation in Mathematics and Physics and a Master's in Financial Engineering, I am actively pursuing a career in quantitative finance. Drawing from my experience in Corporate & Investment Banking, I specialize in bridging the gap between advanced mathematical theory and scalable technology. My work focuses on designing AI-driven workflows, robust data pipelines, and intelligent architectures for stochastic modeling and derivatives pricing.

EDUCATION

UPM/BME (Universidad Polit cnica de Madrid & BME) Sept 2026 - Expected Dec 2027 (Available June 2027)

Master in Financial Engineering & Innovation (MEFI) - Madrid, Spain

Awarded 50% Excellence Scholarship. Focus on Quantitative Finance, Portfolio Risk Optimization, and Statistical Arbitrage.

University of Oviedo

Sept 2021 - June 2026

Double Degree in Mathematics and Physics - Oviedo, Spain

GPA: 9.5/10 (Ranked 2nd in class). Awarded 11 Honors in core quantitative subjects, including Probability, PDEs, Optimization, and Finite Differences

Pre-University Metric: EBAU Score of 13.7/14 (Ranked Top 10 in Asturias).

University of Split

Sept 2024 - June 2025

Erasmus+ (Computer Science & AI Exchange Program) - Split, Croatia

Specialized in advanced Deep Learning architectures (CNNs, LSTMs) and AI algorithms.

EXPERIENCE

NTT DATA Europe & Latam

Jan 2026 - Jun 2026

Corporate & Investment Banking Intern (CIB) - Oviedo, Spain

Designed and implemented an AI-driven process optimization solution for Banco Santander's Confirming area (~300,000 budget).

Engineered automated data pipelines (Python, FastAPI, Pandas) and integrated graph databases to optimize Global Transaction Banking workflows.

Automated trading operations and financial reconciliation pipelines using n8n orchestration and NLP, drastically reducing manual intervention.

Freelance

Sept 2021 - June 2023

Advanced Mathematics & Physics Tutor - Asturias, Spain

Instructed students in Multivariable Optimization, Differential Calculus, and Finite Difference Methods.

PROJECTS

Hybrid Real Estate Valuation Model (Math Thesis)

Sep 2025 - June 2026

Grade: 10/10 (Proposed for Honors). Code: github.com/AnxoHerrera/multimodal-real-estate-valuation-model

Engineered a hybrid machine learning architecture synthesizing OpenAI CLIP image embeddings with XGBoost on tabular data for housing price prediction.

Built an automated web scraping data pipeline and relational database utilizing Supabase.

Adaptive Optics Wavefront Reconstruction (Physics Thesis)

Jan 2026 - June 2026

Grade: 10/10 (Proposed for Honors).

Benchmarked Artificial Neural Network (ANN) architectures against classical least-squares estimators for wavefront reconstruction in Kolmogorov turbulence models.

Electricity Price Modeling (Quantitative Hackathon)

April 2024

Benchmarked ARIMA, Prophet, and XGBoost models for intraday price forecasting in highly volatile energy markets.

Engineered synthetic features using rolling variances to capture market microstructure and execution signals.

SKILLS

Programming & ML: Python (PyTorch, TensorFlow, XGBoost, Scikit-learn, Pandas, NumPy), SQL, R, MATLAB

Quantitative Finance: Stochastic Calculus, Time Series, Statistical Modeling, Credit Risk (VaR, CVaR, RORAC), Derivatives Pricing

Tools & Infrastructure: Docker, Git, FastAPI, n8n, Supabase, LaTeX

Languages & Interests: Spanish (Native), English (C1), French (B1) | Algorithmic problem-solving, strength training, mountaineering
