

ANXO HERRERA CASTRO

Madrid, Spain | (+34) 684 60 8127 | anxoherrera@gmail.com
LinkedIn: <https://www.linkedin.com/in/anxoherrera> | GitHub: <https://github.com/AnxoHerrera>

PROFILE

Quantitative finance professional (MEFI Master, Double Degree Math & Physics, 9.5/10 GPA). Expertise in stochastic modeling, derivatives pricing (Black-Scholes), and AI-driven process optimization. Proven track record in CIB building robust data pipelines, graph databases, and systematic automated workflows using Python.

EDUCATION

UPM/BME (Universidad Politécnica de Madrid & BME)

Master in Financial Engineering & Innovation (MEFI) | Sept 2026 - Expected Dec 2027 (Available June 2027)

- Awarded 50% Excellence Scholarship. Focus on Quantitative Finance, Portfolio Risk Optimization, and Statistical Arbitrage.

University of Oviedo

Double Degree in Mathematics and Physics | Sept 2021 - June 2026

- GPA: 9.5/10 (Ranked 2nd in class). Awarded 11 Honors in core quantitative subjects, including Probability, PDEs, Optimization, and Finite Differences
- Pre-University Metric: EBAU Score of 13.7/14 (Ranked Top 10 in Asturias).

University of Split

Erasmus+ (Computer Science & AI Exchange Program) | Sept 2024 - June 2025

- Specialized in advanced Deep Learning architectures (CNNs, LSTMs) and AI algorithms.

EXPERIENCE

NTT DATA Europe & Latam

Corporate & Investment Banking Intern (CIB) | Jan 2026 - Jun 2026

- Designed and implemented an AI-driven process optimization solution for Banco Santander's Confirming area (Euro 300,000 budget).
- Engineered automated data pipelines (Python, FastAPI, Pandas) and integrated graph databases to optimize Global Transaction Banking workflows.
- Automated trading operations and financial reconciliation pipelines using n8n orchestration and NLP, drastically reducing manual intervention.
- Modeled and monitored credit risk parameters, supporting quantitative infrastructure for Tier-1 financial entities.

Freelance

Advanced Mathematics & Physics Tutor | Sept 2021 - June 2023

- Instructed students in Multivariable Optimization, Differential Calculus, and Finite Difference Methods.

PROJECTS

Hybrid Real Estate Valuation Model (Math Thesis)

Sep 2025 - June 2026

- Grade: 10/10 (Proposed for Honors). Code: github.com/AnxoHerrera/multimodal-real-estate-valuation-model (<https://github.com/AnxoHerrera/multimodal-real-estate-valuation-model>)

- Engineered a hybrid machine learning architecture synthesizing OpenAI CLIP image embeddings with XGBoost on tabular data for housing price prediction.
- Built an automated web scraping data pipeline and relational database utilizing Supabase.

Adaptive Optics Wavefront Reconstruction (Physics Thesis)

Jan 2026 - June 2026

- Grade: 10/10 (Proposed for Honors).
- Benchmarked Artificial Neural Network (ANN) architectures against classical least-squares estimators for wavefront reconstruction in Kolmogorov turbulence models.

Electricity Price Modeling (Quantitative Hackathon)

April 2024

- Benchmarked ARIMA, Prophet, and XGBoost models for intraday price forecasting in highly volatile energy markets.
- Engineered synthetic features using rolling variances to capture market microstructure and execution signals.

SKILLS

Programming & ML: Python (PyTorch, TensorFlow, XGBoost, Scikit-learn, Pandas, NumPy), SQL, R, MATLAB

Quantitative Finance: Stochastic Calculus, Time Series, Statistical Modeling, Credit Risk (VaR, CVaR, RORAC), Derivatives Pricing

Tools & Infrastructure: Docker, Git, FastAPI, n8n, Supabase, LaTeX

Languages & Interests: Spanish (Native), English (C1), French (B1) | Algorithmic problem-solving, strength training, mountaineering
